

Benchmark for Hail, Wind, and Lightning

Weather Analytics at your fingertips

When a severe storm occurs, do your teams have easy access to weather verification tools they need to adjust claims quickly? Benchmark™ hail, wind, hurricane, and lightning analytics give you granular, near real-time maps and property-specific reports of weather to help you get your affected customers back on their feet faster.

By using industry-leading weather analytics tailored to your business, you can have better information about neighborhood-by-neighborhood impacts after a storm. This helps you understand the severity and volume of claims faster and respond quickly for greater customer satisfaction.

Benchmark® Hurricane Report

Date of Report: November 21

Client Details:

Property Address: 3330 Columbia

ZIP Code: 15116

Client Number: 1000000000

Date of Loss: 9/30/20

Case of Loss: 1000000000

Assignment Date: 10/10/20

Report Period: 9/30/20-10/10

Survey Period: 9/30/20-10/10

Benchmark® Hail Date of Loss Report

Date of Report: November 21, 2020 11:30:00

Client Details:

Property: 3330 Columbia Ln, New Bern, NC

Company Name: Verisk Analytics

Address: 4000 Mountain Parkway, Raleigh, NC

Phone: 919.276.0000

Email: verisk.analytics@verisk.com

Latitude: 35.8113

Longitude: -77.0512

Hail Date of Loss Analysis from the Benchmark® Database

Summary: A significant hail event occurred at the address on the date of loss, the day prior or day after.

Date	At Property Address			Within 1 Mile			Within 5 Miles		
	Day	Time	Severity	Day	Time	Severity	Day	Time	Severity
9/30/20	0:00	0:00	0	0:00	0:00	0	0:00	0:00	0
10/10/20	0:00	0:00	0	0:00	0:00	0	0:00	0:00	0

Description of Hail Measurements

This report documents hailstone activity over a 72-hour period within a 5-mile radius of the address.

Property	Date	Time	Severity	Height	Radius	Line
3330 Columbia Ln	9/30/20	0:00	0	0	0	0

Damaging weather values

Property	Date	Time	Severity	Height	Radius	Line
3330 Columbia Ln	9/30/20	0:00	0	0	0	0

8 Reasons Leading P/C Insurers use Benchmark for Hail, Wind, and Lightning Claims

1. Fast	Data is available in near-real-time—everything you need to process weather-related claims at FNOL.
2. Easy	Minimize guesswork by field staff.
3. Flexible	Order and access Benchmark reports from XactAnalysis, Xactimate, ClaimSearch, Decision Net, the online store, or through the Benchmark API.
4. Intuitive	Straightforward report template gives a comprehensive summary of hail, wind, hurricane, and lightning activity at the property level.
5. Accurate	Relies on Respond™ weather data, which models severe weather perils using dual-pol radar and cutting-edge algorithms developed by Verisk Weather Solutions scientists and meteorologists.
6. Streamlines claims management	Reduces multiple inspections. Quickly verify if the property has been subject to damaging weather and is in need of further in-person inspections.
7. Cost-effective	Reduces loss adjustment expenses by using deployed resources more effectively. Reduces losses by identifying errors or fraud early.
8. Comprehensive	The most extensive history of weather-related events for each property location in the United States and Canada.

How it works

Save time and improve accuracy when adjusting claims due to hail, wind, and lightning

Property and casualty insurers and their service provider partners depend on weather analysis to help policyholders recover after a severe storm. Benchmark delivers the most accessible and comprehensive weather verification data available—in the field and in the claims record.

Benchmark for XactAnalysis® and Benchmark for Xactimate®

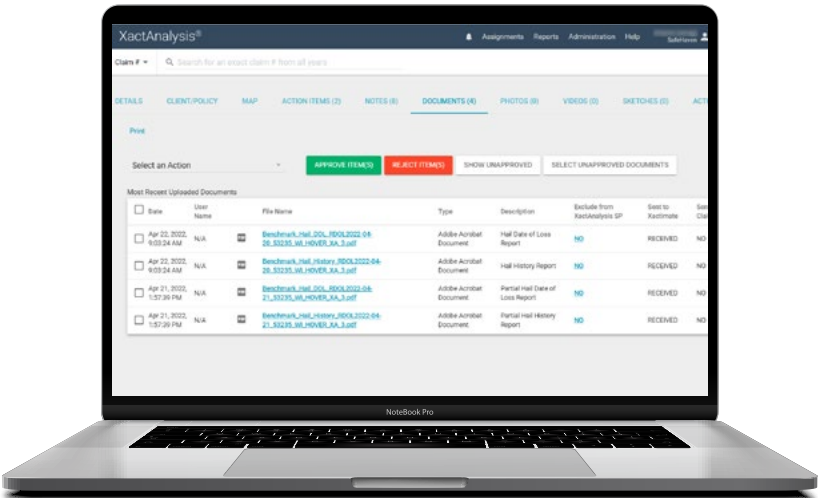

Benchmark delivers address-specific hail, wind, hurricane, and lightning reports into the claim record within your existing claims and estimating workflows.

Access vital weather information directly within your ClaimSearch workflow

ClaimSearch users can easily access Benchmark reports directly from the system's Decision Net tile to confirm relevant weather details for claim processing and detect aberrant claim information and potential red flags of fraud.

Benchmark APIs

Benchmark APIs seamlessly integrate directly into your existing workflow. Use the API to validate any type of weather-related loss for property and auto claims with the flexibility and consistency of using a single data source throughout your entire organization.

Report delivery automation lets you instantly order a Benchmark report if user-specified conditions are met. For example, if 1-inch hail falls within 1 mile of a property, but the claim indicates a different date of loss (DOL), the reported DOL may be incorrect and a Benchmark report is automatically appended to the assignment.

Expand your claims insights with the full suite of Verisk weather intelligence

Beyond the property-specific peril reports provided by Benchmark, the Verisk Respond™ product correlates severe weather shape files to your policies-in-force, giving you the information you need to set aside reserves, position response teams, triage weather claims, and proactively reach out to affected policyholders for improved customer satisfaction.
