

# Access property-specific weather data for faster claim validation

Verisk, a Guidewire PartnerConnect Solutions Program member, offers claims handling products and services within the Guidewire platform.

## Benchmark weather history reports for ClaimCenter

Verisk's Benchmark® weather history reports and alerts are now integrated into Guidewire's ClaimCenter, streamlining access to weather verification data early in the claims process.

### The solution:

Request and receive reports and alerts for hail, wind/hurricane, and lightning claims at the start of a claim's lifecycle through the Guidewire platform.

### The benefits:

Get precise, location-specific weather data on severe weather events' timing and magnitude, ensuring fair claim assessments and appropriate compensation.

Expedite claim validation by identifying the exact date and time of the weather-related damage, reducing the need for additional investigations.

Access historical records of weather events for any location to help assess risk and determine whether damage predated policy inception.

Available for the following versions of Guidewire ClaimCenter:  
Version 10, Cloud

Ready For Guidewire  
ClaimCenter 10
