

# See the Big Picture: How to Stay Ahead of Emerging Risks

## THE CHALLENGE

### **Holistic view of risk**

As the liability insurance risk landscape becomes more complex, over \$40 trillion of global risk exposures are evolving faster than ever.

Insurers face increasing pressure to anticipate and adapt to emerging exposures such as environmental litigation, regulatory changes, and technological risks.

Without robust foresight, liability insurers risk inaccurate pricing models and unexpected claims that can affect profitability. To stay competitive, insurers need more than intuition – they require actionable insights backed by data to forecast and mitigate risks before they begin.

## THE SOLUTION

Planning for new risks with limited information can be overwhelming. Our solutions help you achieve your underwriting strategy objectives by identifying under or overexposed segments of your risk appetite, prompting alerts to take well-informed underwriting actions.

Our liability analytics platform provides a comprehensive view of liability risks across industries. By integrating scientific research, trends, and historical data, we use supply-chain relationships to build scenarios that reflect accumulations among the casualty policies in your portfolio.

We don't just deliver data; we help you understand the story behind it. With the Verisk Casualty Catastrophe Model, clients can better manage accumulations by:

Optimizing  
portfolio designs

Monitoring  
portfolio exposures

Quantifying  
losses by peril

Analyzing emerging  
risk scenarios

**With the Verisk Casualty Catastrophe Model, you're not just reacting to emerging risks; you're leading the way, turning challenges into opportunities and uncertainty into success.**
