

Verisk Model Exchange

Unlock a diverse ecosystem of catastrophe models on one platform

Deploying a range of third-party and in-house developed catastrophe models can complicate workflows for insurers and reinsurers while straining their IT resources to integrate multiple vendor platforms. These challenges can limit carriers' access to diverse risk views and the full choice of models they need.

Verisk Model Exchange delivers a hub for cost-efficient catastrophe risk assessment that enables insurers and reinsurers to access and deploy a wide range of models without the need for multiple platforms. This vendor-neutral solution allows users to evaluate and select the models best suited to their view of risk from options spanning natural catastrophe and specialty lines such as terrorism, renewable energy, and cyber.

The platform includes models built on the Oasis Loss Modelling Framework—the industry-standard open-source catastrophe risk modeling framework—and is delivered as a SaaS solution you can access through your web browser or API.

Model Exchange enables firms to:

Easily evaluate risk models from multiple vendors on one platform

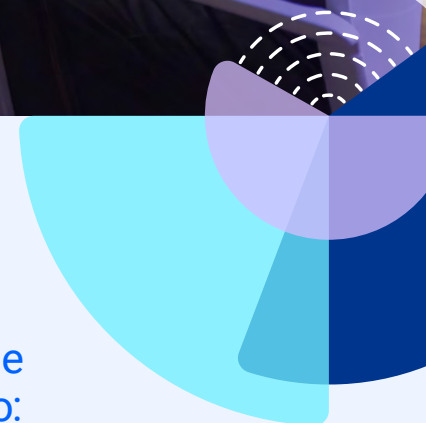

Execute risk calculations using the models best suited for their view of risk

Substantially lower the cost of risk modeling and improve productivity

Rely on scalable, cloud-based computing capacity without investing in hardware

Easy access

Model Exchange brings multiple catastrophe risk model providers together on one independent platform, lowering barriers to entry for vendors. It provides secure, easy access and delivers increased choice to the market.

Benefits for clients

- Widen and deepen understanding of catastrophe risk with increased choice of third-party or in-house developed models.
- Tap into the growing Oasis and third-party modeling community and avoid vendor lock-in.
- Reduce operating overhead with a unified platform.
- Cut the costs of installing and maintaining on-premise deployments.
- Access multiple vendors and models in one ecosystem with one point of contact for end-to-end support.
- Onboard in weeks, not months with no client-side installation required.

Get started with Model Exchange

Accessing a governed, multi-vendor catastrophe modeling ecosystem is simpler than you think.

Demo

Schedule a personalized walkthrough tailored to your team's priorities.

Evaluate

Run models against your own exposures and gain hands-on experience with the platform your team will actually use.

Go Live

When you're ready, we activate your dedicated production environment. any available third-party data. No complex setup, just smarter estimating, right where you work.
