Today's Agenda

- 1 The Core Problem
- 2 XactGen Roofing Overview and Benefits
- 3 Live Demo
- 4 Questions and Final Takeaways

The Core Problem

Roofing estimates are one of the biggest bottlenecks in property claims

Roofing is one of the most common and time-consuming parts of a property claim. Even with roof measurement data available, adjusters still spend significant time translating that information into estimate line items, quantities, and supporting details.

Core challenges:

- Roof damage represents a major share of property claims.
- Roofing estimates can take 20–40 minutes to build manually.
- Measurement inconsistencies can lead to re-validation, rework, and cycle time delays.
- During CAT events, users are under pressure to process high claim volumes quickly.
- Roof estimation often becomes one of the largest time bottlenecks in the Xactimate workflow.

What is XactGen Roofing?

XactGen Roofing helps turn roof measurement data into estimate line items in minutes

XactGen Roofing is a roof estimation solution embedded directly within Xactimate®. It helps users generate roofing estimate line items and quantities using roof measurement data, estimate context, roofing geometry, material data, historical industry intelligence, and dynamic decision logic.

Instead of manually building a roof estimate from scratch, users can launch XactGen Roofing from within the Xactimate workflow, review the generated results, and make any necessary edits before finalizing the estimate.

What XactGen Roofing helps do:

- Generates roofing line items and quantities from roof measurement data.
- Helps reduce manual estimate-building time.
- Supports more consistent and defensible roofing estimates.
- Keeps the adjuster in control with the ability to review, edit, and validate.
- Works inside Xactimate

Core promise:

Get roofing estimates 80% complete in minutes.

The Benefits

Faster roofing estimates, with consistency built in

XactGen Roofing helps claims teams reduce manual effort and move faster through one of the most time-consuming parts of the estimating workflow.

Key benefits:

- Saves time by reducing manual roof estimate-building
- Improves consistency with structured data and guided estimate logic
- Keeps users in control with the ability to review and edit outputs
- Supports productivity by giving adjusters more time back
- Adds value during CAT events when speed and consistency matter most

Bottom line:

XactGen Roofing helps users get to a more complete, defensible roofing estimate faster, directly inside Xactimate.
