

SECTION 111 DATA SYNC

Accurate, automated TPOC / WCMSA Section 111 reporting

Prevent post-settlement issues before they start

Automatically populate WCMSA settlement data into your Section 111 reporting workflow—surfacing and resolving missing or inconsistent data to streamline operations and enhance accuracy.

Expanded CMS reporting requirements introduce new WCMSA data fields that must be captured on a claim-by-claim basis. Because this information is often buried in settlement documents and manually entered, it introduces inconsistencies and elevates MSP compliance risk. Inaccurate reporting can also affect post-settlement Medicare coverage for the claimant.

Section 111 Data Sync helps RREs identify data issues earlier, resolve them quickly, and submit WCMSA reporting accurately, on time, and with confidence.

Backed by decades of enterprise-grade data security, privacy, and resilience you can trust

Why it matters

Incomplete, inconsistent, or inaccurate reporting of WCMSA values can introduce the potential of civil monetary penalties (CMPs). Further, because accurate WCMSA reporting directly impacts Medicare coordination of benefits post-settlement, errors can lead to inappropriate treatment denials. Section 111 Data Sync helps mitigate this risk by improving the accuracy and consistency of this critical compliance step.

Built to address expanded WCMSA reporting requirements, Section 111 Data Sync helps:

- Keep pace with increased CMS scrutiny of MSA reporting practices
- Reduce Civil Money Penalties risk from delayed, rejected, or inaccurate submissions
- Maintain consistency between settlement documentation and reported values
- Improve confidence in the completeness and reliability of reported data
- Be prepared for CMS audits

How Section 111 Data Sync helps

Error Reduction & Validation

Identifies missing or inconsistent values from your most recent records on file before submission, reducing errors.

Automated Data Extraction

Extracts WCMSA values directly from CMS decisions, prior MSAs completed or settlement agreements for one-click approval without manual data searching or entry.

Required Field Population

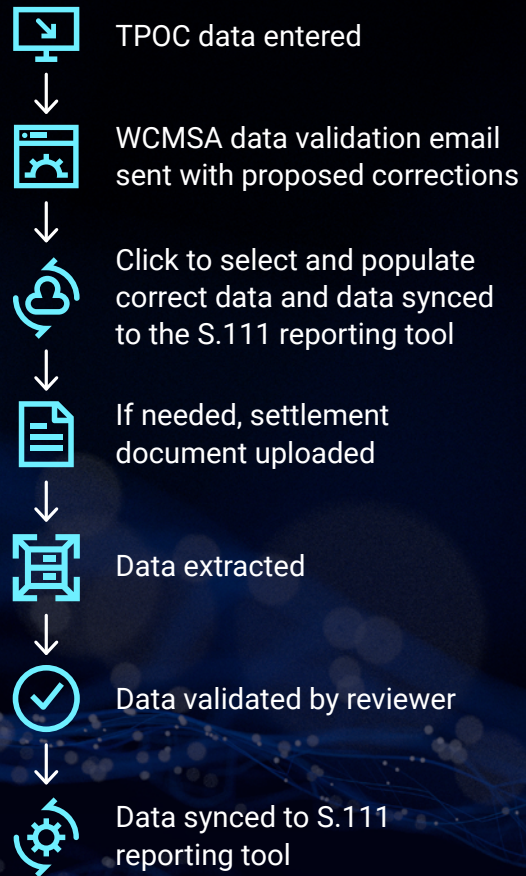

Ensures completion of CMS reporting fields, including:

- WCMSA Amount
- WCMSA Period
- Lump Sum or Structured Payout
- Initial Deposit Amount
- Annual Deposit Amount

Seamless Section 111 Integration

Automatically routes validated WCMSA data into your Section 111 reporting
