

Integrate cyber with your total view of risk

Cyber risk modeling on Verisk Model Exchange

Cyber is a material, measurable exposure, and Verisk Model Exchange brings the same rigorous, governed, vendor-neutral framework that has been leveraged for property catastrophe modeling to cyber risk assessment. Multiple independent models, side-by-side comparison, and full auditability are all within a single environment.

A governed ecosystem for cyber risk

Cyber demands the same rigor as any other material peril. Model Exchange applies the multi-model framework and open standards that define property catastrophe risk assessment to cyber, enabling consistent evaluation, auditable outputs, and defensible decisions across your full portfolio.

Multiple independent cyber models

Evaluate diverse cyber risk perspectives from independent vendors within a single governed platform—consistent with how the industry approaches natural catastrophe modeling.

Consistent governance across perils

Cyber models on Model Exchange run on the same open standards, API integrations, and auditable framework as the rest of the platform—one environment, one contract, one point of contact.

A platform built to grow with the market

As your cyber modeling needs evolve, Model Exchange expands alongside them, giving you the flexibility to adopt new models and vendors without adding platforms or overhead.

Model Exchange enables companies to

Evaluate independent cyber risk models from multiple vendors on one platform

Apply consistent governance and open data standards across natural catastrophe and cyber portfolios

Compare diverse scientific perspectives on cyber exposure through one vibrant and evolving ecosystem

Run cyber risk calculations using the models best suited to their view of risk

The Model Exchange advantage

- Access multiple independent cyber risk models on one governed platform.
- Compare diverse scientific perspectives on cyber exposure with full auditability.
- Apply the same open standards and API integrations your cat modeling team already uses.
- Avoid vendor lock-in in a governed, neutral ecosystem.
- Onboard in weeks, not months, with no client-side installation required.

Get started

New to Model Exchange?

Demo

Schedule a personalized walkthrough tailored to your team's priorities.

Evaluate

Run models against your own exposures and gain hands-on experience with the platform your team will actually use.

Go Live

When you're ready, we activate your dedicated production environment.

Already a Model Exchange client?

Cyber modeling is available within your existing environment. Contact your account team to activate access and explore the cyber vendor ecosystem.

Extend your view of risk to cyber.
