

Market Intelligence That Matches Where You Write

Get the data you need by state, ZIP, and ISO class in a footprint-based package

Priced to align more closely with only the data you need

If you write in a handful of states, a national dataset means acquiring breadth you don't need and sifting through signals that don't apply to your book. You're left with two choices: stretch your budget for information you won't use or settle for less granular information than your decisions deserve.

ISO® DataCube® aligns your subscription to the U.S. jurisdictions most relevant to your book. Choose a regional package from 1 up to 10 states, then drill down into the ZIP code and ISO class code granularity DataCube is known for, across the lines of business you write.

Lines of business supported

ISO® DataCube® is available for the following commercial and personal lines:

Businessowners

Homeowners

Commercial Auto

Personal Auto

Commercial Property

Dwelling

General Liability

Personal Liability

Key benefits

- Match your data to your footprint, and right-size your spend. Configure your subscription around the states you write today from 1 up to 10 states and expand as your footprint grows.
- Move faster, with more confidence. Cut the noise from out-of-footprint data and analyze performance drivers at the level of detail your underwriting, pricing, and portfolio decisions require.

Who it's for

Built for carriers and MGAs writing in up to 10 U.S. states who want data that matches their footprint without subscribing to unnecessary breadth. Designed for actuarial, underwriting, product, and strategy teams that need credible, consistently formatted market data to back confident decisions.

Common use cases

- **Territory and class analysis:** Identify patterns in loss and premium experience by territory and classification.
- **Pricing and rate support:** Complement your internal indications with an external data source by coverage and segment.
- **Portfolio benchmarking:** Benchmark your own portfolio against external market indicators.
- **Growth planning:** Evaluate adjacent expansion opportunities without committing to a national dataset.

What you get

- Premium and loss experience data by state, classification, and coverage to support underwriting, pricing, benchmarking, and portfolio analysis
- A multi-year view of the latest available five years of experience for trend analysis and performance comparison
