Benchmark® Weather History Reports

Benchmark® data has been demonstrated to align with the occurrence of severe weather. We regularly review its accuracy and calibrate our algorithms using industry claims data and other sources of ground-truth to maximize performance. Benchmark® processes high resolution datasets from sources such as radar, numerical weather models, and lightning networks using models and proprietary algorithms developed by our advanced-degreed meteorologists and scientists. We ingest data from the WSR-88D radar network incorporating polarimetric variables to derive the most accurate representation of the weather. At Verisk, we create hazard indices that specifically pertain to the insurance industry and their service partners.

Verisk provides software, data, and analytics for enterprise weather risk management. Insurers can apply these solutions to help improve customer service, achieve more accurate risk selection, and reduce claims cycle time. Manufacturers, distributors, and retailers rely on Verisk to accelerate revenue growth through more accurate forecasts of product demand and to promote stable operations by helping mitigate supply chain risk.
