Property and Restoration
Solutions

Jeff Young

Vice President of Product
The "Narrator"

Ryan Roberts

Product Director
The "Adjuster"

Cade Taylor

Sales Engineer
The "Policyholder"

Today's Agenda

- 1 The Core Problem
- 2 How XactGen Capture Improves Workflows
- 3 Live Demo
- 4 Pilot learnings
- 5 Questions and Final Takeaways

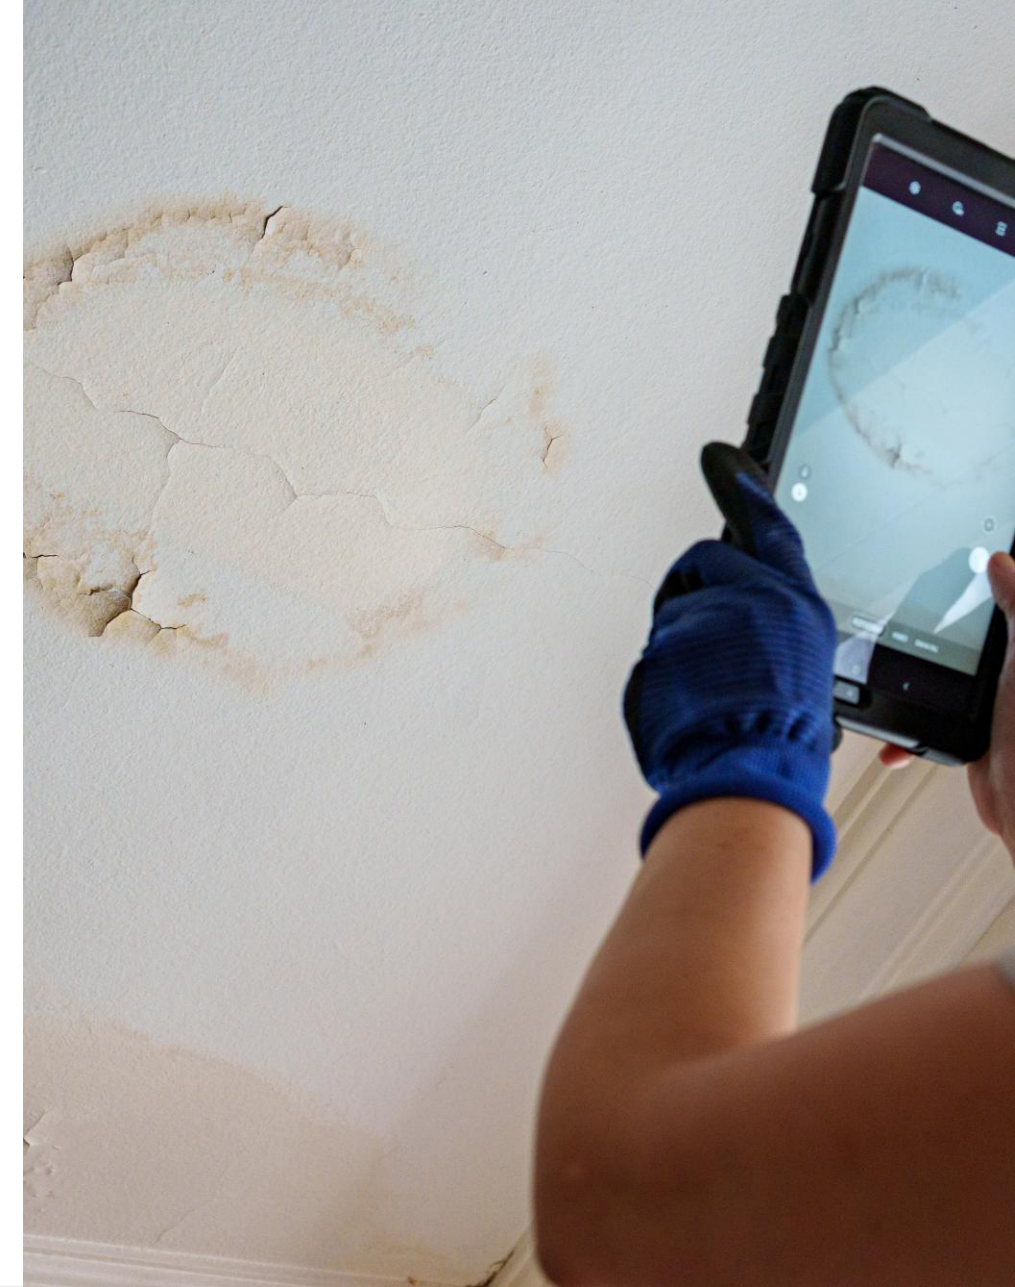

The Core Problem

Routine interior water claims still create unnecessary fieldwork, tying up experienced adjusters

Traditional workflow often require a field visit or leave desk adjusters reconstructing scope from incomplete policyholder photos.

Core challenges:

- Longer cycle time: Scheduling and incomplete documentation delays decisions.
- Higher handling costs: Routine claims consume field and desk resources.
- Policyholder friction: Scheduling delays mean longer wait times for resolution.

How XactGen Capture Improves the Workflow

Bottom Line

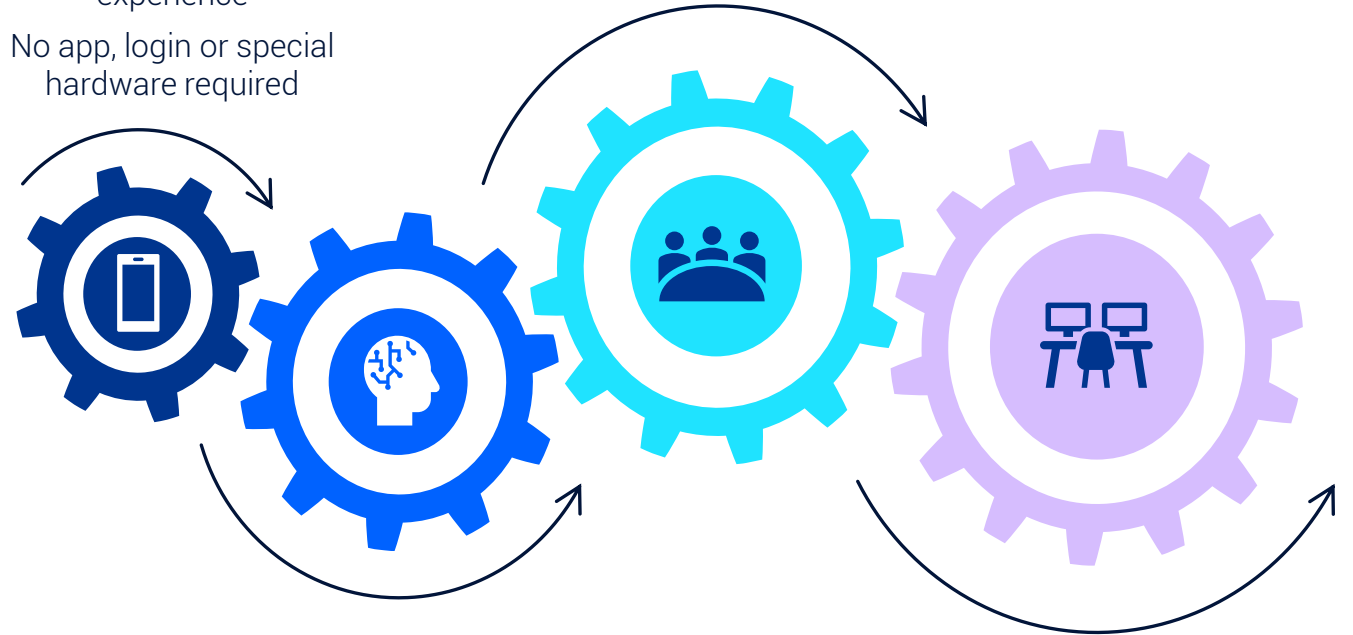

Settle qualifying interior water claims faster, with confidence

Policyholder captures damage

- Guided, browser-based experience
- No app, login or special hardware required

Experienced estimators review the output

- Ensures delivered estimates are high quality
- Explainable, quality controlled results

XactGen Capture creates the estimate package

- Photos, measurements, sketch and estimate
- Built to carrier guidelines

Desk adjuster reviews and settles

- Keeps qualifying claims at the desk
- Improves throughput and preserves field capacity

XactGen Capture Featured Demo

XactGen Capture

- Simple for policyholders
- Estimate-ready results in hours
- More claims evaluated at the desk
