

XACTRESTORE SKETCH SCAN

Walk the space. Get the sketch.

You've got a job to do.

Your sketch shouldn't be what holds you back.

Room by room. Wall by wall. Tap, measure, connect, repeat. Every extra minute in the field is a minute you're not moving to the next job.

What if your sketch built itself while you walked?

Introducing XactRestore Sketch Scan

Sketch Scan uses LiDAR, AI, and computer vision to automatically generate a complete, connected floor plan, right inside XactRestore®. Your scan will even include reference blocks, cabinetry and contents items.

Just walk the space, and your sketch is ready to review.

What you get in a single scan?

Multi-room
floor plan

Connected
layout

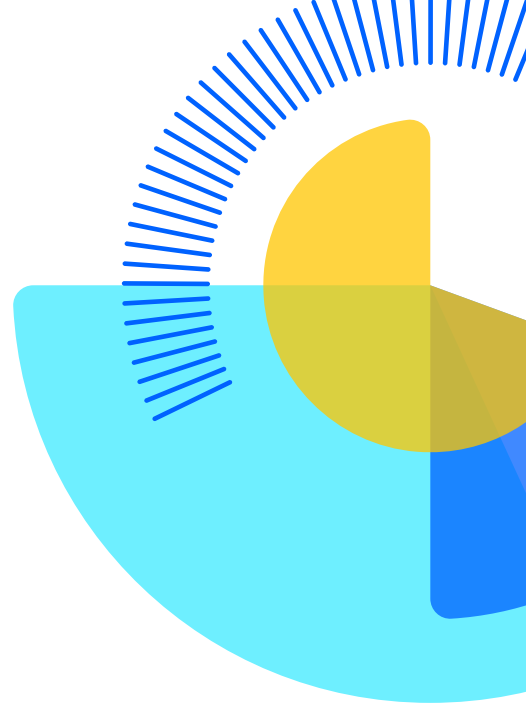

Walls,
openings,
and key
features

Room features
captured
automatically

Just walk, scan,
and review.

**Go faster. Capture more.
Close sooner.**

Faster sketches, fewer steps

Eliminate the tap-measure-connect cycle. Sketch Scan™ captures multi-room interiors in a single scan, so you spend minutes at the site, not hours.

Reduce rework from day one

Generate a complete, connected floor plan on your first walkthrough. Fewer adjustments. Fewer return visits. More confidence in your estimate.

Capture more than just walls

Sketch Scan automatically detects and incorporates key room elements as you move through the space:

Cabinets—recognized and placed in the sketch

Openings—doors, windows, and missing walls identified

Room features—captured and included in the sketch without extra steps

Build a more complete, accurate sketch without lifting a finger.

Part of XactAI

Sketch Scan is built directly into XactRestore

No exports, no file conversions.
No rework. Just a faster way to get started.

Get started with smarter sketching.

XactRestore Sketch Scan is available within the XactAI bundle.
