

Capture, Validate, and Manage Photos with Ease

PPW Photo Management

In the property preservation industry, photos aren't just documentation - they're the backbone of proof, compliance, and accountability. With PPW's **Photo Management**, you gain a robust, fully integrated solution that ensures every photo captured in the field meets the highest standards of authenticity, accuracy, and compliance.

Using the **PPW mobile app**, field workers can leverage the native camera functionalities of iOS and Android devices to quickly and reliably capture the photos they need while on-site. Every photo can be instantly validated for geo-location, timestamps, and tamper-proofing, ensuring you're never left questioning the integrity of your data. You can trust that every image represents the real work completed, at the right place, and at the right time.

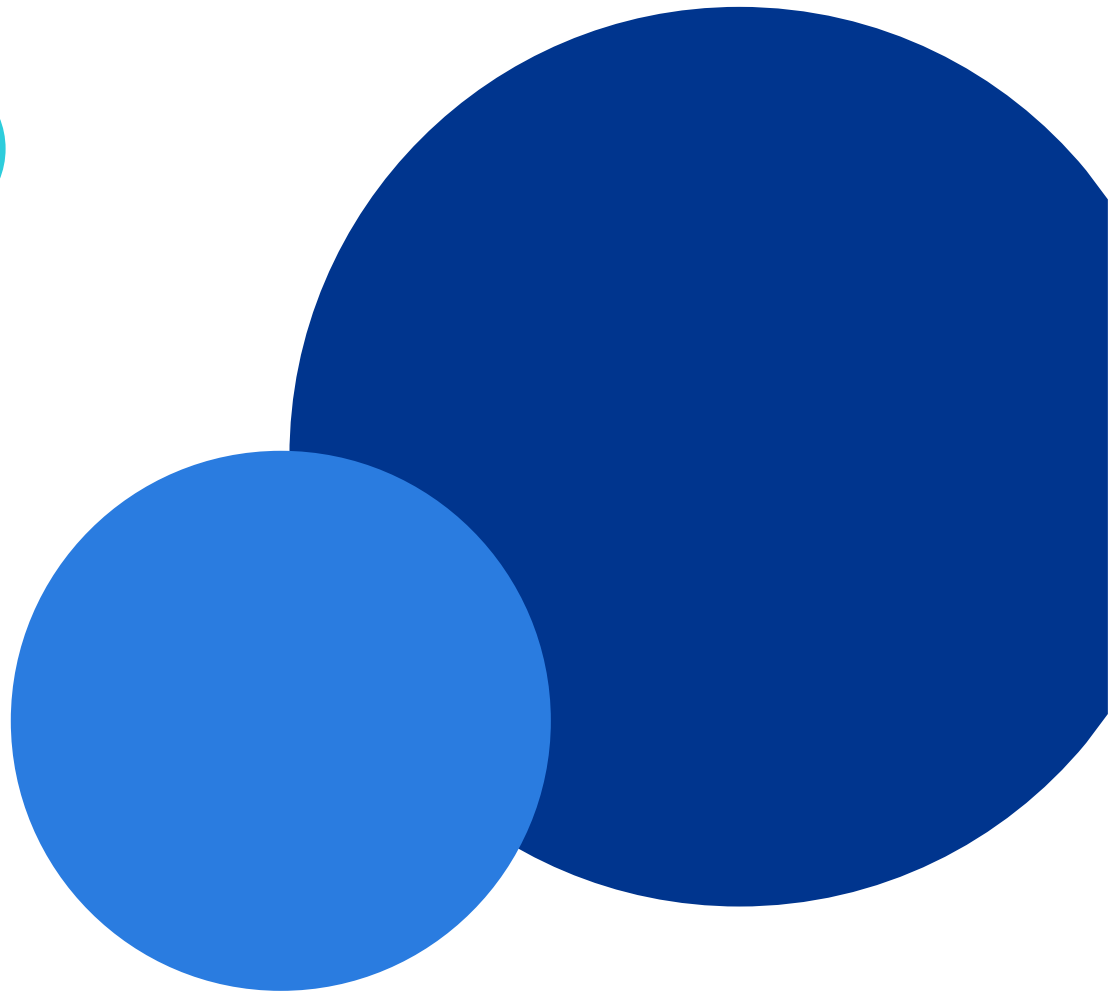

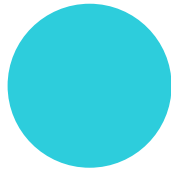

In addition to photo capture, the PPW mobile app supports **industry-standard check-in capabilities**, ensuring visibility into who is on-site. Providing full visibility in the PPW back office so you know exactly who checked in and when - helping you maintain security, compliance, and accountability across your operations.

Key Capabilities:

- **Granular Photo Requirements:** Configure photo requirements with fine control - set minimum and maximum photos by work type or at the form question level, ensuring that the right amount of evidence is captured for each task.
- **Tamper-Proof Validation:** Each photo is automatically validated for geo-location, timestamp, and authenticity, so there's no doubt about the validity of your documentation.
- **Sophisticated QC Tools:** Back-office staff can flag, review, and adjust photos as needed, correcting tagging errors from the field and comparing new photos with previously captured ones at the same property to ensure consistency.
- **Map-Based Photo Review:** QC staff can see exactly where photos were taken using a map view in the PPW back-office portal, providing a clear visual layer for verifying proof of work.
- **Industry-Standard Check-In:** The mobile app supports industry-standard check-in capabilities, giving you visibility into who checked in at the property, with full tracking and reporting in the PPW back-office portal.
- **Fast and Reliable Capture:** The mobile app integrates with the device's native camera for seamless, quick photo capture, allowing field workers to document their tasks without any delays.

With **PPW's Photo Management**, your field teams and back-office staff have everything they need to document, validate, and prove work—making it an essential tool for maintaining compliance, transparency, and client trust.
