

Take Control of Your Spending and Service Limits with Precision

PPW Order Frequency Controls

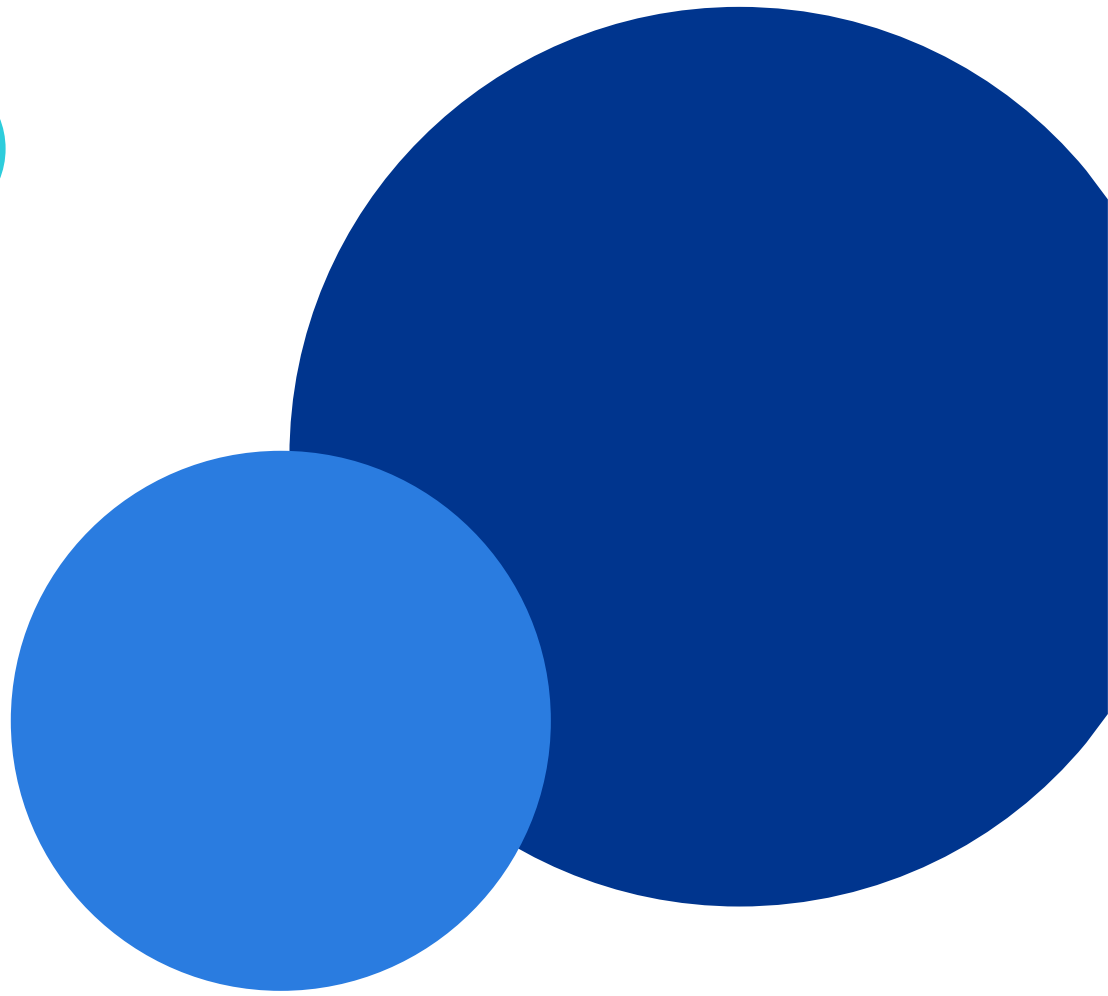

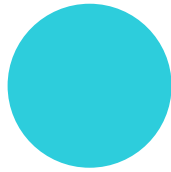

PPW Order Frequency Controls delivers the precision you need to manage service frequency and spending limits at the property level. Whether it's restricting the number of services or enforcing dollar thresholds, you can easily stay within client guidelines while maintaining flexibility. With customizable limits by client, work type, and more, this feature ensures your team avoids the costly mistake of exceeding limits—preventing the frustration of denied invoices and keeping your operations running smoothly.

Order Frequency Controls simplifies this process by allowing you to set customized limits directly within PPW at the property level, ensuring compliance with client guidelines while maintaining flexibility when needed.

Key Features:

- **Customizable Limit Settings:** Set limits for both service frequency and dollar amounts by Line Item, Client, Work Type, and more.
- **Multi-Level Control:** Configure limits by Category, Client, Customer (your client's client), and Loan Type, ensuring that all parameters are accounted for.
- **Flexible Time Intervals:** Set maximum service occurrences for defined periods—days, weeks, or months—or control the total dollar amount on a monthly, quarterly, or annual basis.
- **Smart Frequency Management:** Set service frequency limits by the number of occurrences within a specific timeframe (X number of days, weeks, or months).
- **Permission-Based Overrides:** Empower authorized users to override service or cost limits when they anticipate approval from asset owners, ensuring continued service without unnecessary delays.
- **Perfect for Portfolio Management:** Ideal for organizations managing large portfolios where strict guidelines for spend and service frequency are essential to maintain compliance and efficiency.

Order Frequency Controls makes it easier to stay compliant while giving your team the flexibility to manage services efficiently without overspending or over-servicing properties.
