

# Xactimate

**Powerfully fast and effective claims estimation**

### Setting the standard for an entire industry

Xactimate's powerful estimating software has revolutionized structural property claims. From cloud-synced data and flexible platforms to hassle-free software installs, and integrated property data options, Xactimate is the simplest, fastest, and most effective suite of estimation tools ever. And it's only getting better.

### A complete estimating solution

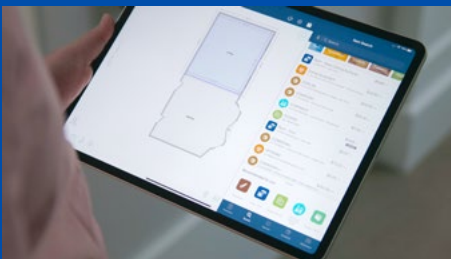

For estimates large or small, simple or complex, Xactimate is the fastest and most comprehensive way to calculate repair costs.

### With Xactimate, estimating a project is as simple as:

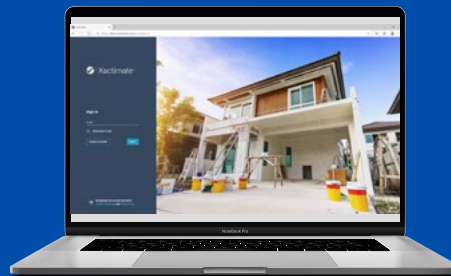

- ✓ Gathering loss information
- ✓ Sketching a diagram of the structure
- ✓ Selecting the related project costs
- ✓ Reviewing and verifying the accuracy of the estimate

### Three platforms for ultimate flexibility

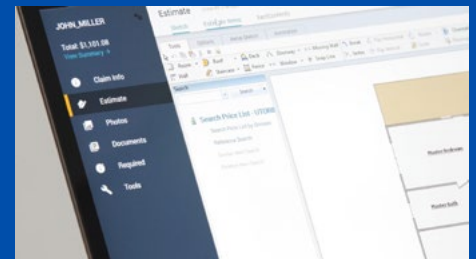

Xactimate desktop, Xactimate mobile, or Xactimate online: Enjoy the flexibility to work where, when, and how you want. Choose any or all Xactimate platforms to fit how you prefer to work and maximize your productivity.

**Mobile** – Complete more of your claims onsite and on-the-go with the Xactimate mobile app for iOS and Android. Automatically sync data using WIFI or cellular connections, or work disconnected and sync once you regain service.

**Online** – Access and update claims quickly wherever you have an internet connection.

**Desktop** – Complete claims from start to finish. Connect to the cloud to send and receive assignments or work offline in the field.

## XactScope improves workflow and reduces estimation errors

The XactScope feature inside of Xactimate helps property claims professionals create faster, more comprehensive estimates with fewer errors.

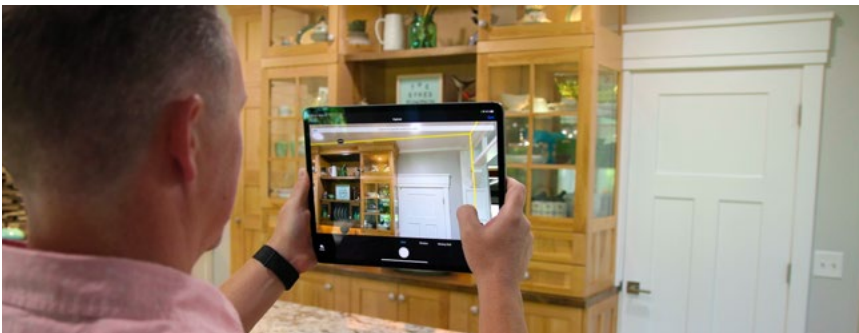

### Water mitigation

As you scope a water loss and place annotations, housing features, and affected surface areas in Sketch, XactScope intelligently and automatically adds all line items, quantities, and actions.

### Roofs and exteriors

XactScope lets you select the entire roof or just a facet, decide whether you prefer to repair or replace, and indicates any material removal requirements. Add in wall elevations to quickly generate exterior estimates in a fraction of the time.

Additionally, roof and exteriors automation capabilities easily integrate with many aerial imagery providers.

## Easy mobile measuring

Xactimate Sketch AR™ frees you up to make direct-to-Sketch measurements from your supported mobile device—allowing you to make adjustments on the fly using augmented reality.

## The most widely used pricing research

Providing the most ubiquitous pricing data in the industry, prices are based on extensive local research more than 468 geographical regions in the United States and Canada. Our cost research includes more than 20,000 surveys each month of labor, material, and equipment suppliers and analysis of more than 124 million data points each year from estimates used to settle property repair claims..

With our cost research, you will:

- Receive monthly cost updates for the neighborhoods where you have claims.
- Automatically receive the appropriate cost research with your assignments based on the postal code of the loss.
- Quickly and easily find the items you need using Xactimate's advanced search features.
- Download as many pricing databases as you need from any Xactimate platform.
- Get key insights on the costs being charged by repair professionals in the areas where you are estimating claims. Participate in cost research by offering feedback, answering surveys, and completing estimates that will be included in our analysis.
- Drill down to see the full detail behind how unit costs are compiled including productivity, wage rates, material components, waste, taxes, and much more. This allows you to negotiate and/or make adjustments to published prices to fit the needs of both your company and specific job conditions.

### **Complete more tasks, more quickly:**

- Use macros to quickly add line items to a room with just a few keystrokes.
- Easily add line items with a visual reference search.
- Take and attach photos, videos, and documentation to the claim estimate.
- Easily estimate electrical, HVAC, plumbing, insulation, and framing.
- Estimate in English, Spanish, German, Dutch, or French, then print reports in the language preferred by your customers.
- Verify your work with an inspection audit of the estimate.
- Organize, manage, share, and store your projects.
- Automate and streamline your estimating processes.
- Get help when you need it from built-in real-time-training helps.
- Online product support available 24/7.

### **Keep your head in the Cloud**

All of your estimate and assignment information is stored on the Cloud so you can flexibly capture a loss on your mobile device, continue working at home or at the hotel with Xactimate desktop, and then share it with coworkers back at the office who log into Xactimate online.

### **Data storage you can depend on**

Xactimate automatically saves, syncs, and stores your files to the Cloud—even in the middle of a job. All data is backed to secure on-site servers for extra protection.

### **Stay on the same page**

Your entire claims team can access and update claim information, which is synced to every other team member. Because your estimates sync to the Cloud, you can easily move between platforms.

### **Single Sign On and a single Xactware ID**

All you need is one Xactware ID to log in and get to work—with no key codes. And to make things even simpler, we can add Xactimate access to your existing single-sign-on system.

### **XactAnalysis**

XactAnalysis is the first, largest, and only full-cycle claims analytical and reporting tool available in the property insurance industry. As claims flow from Xactimate through its network, XactAnalysis constantly monitors the data to help claims professionals catch errors, report on progress, and benchmark performance.

### **Fully integrated with Xactimate**

XactAnalysis allows you to send and receive valuation and estimate assignments to staff, independent adjusters, or contractors who use Xactimate. The network automates the process, reports on progress, and speeds communication and customer service.

You can also use XactAnalysis to transfer projects, macros, price lists, templates, contacts and other information between Xactimate users.

### **Benchmark for Xactimate**

Quickly verify weather-related claims with precise storm data.

Verify date of loss and more with:

- Detailed hurricane, hail, wind, and lightning reports updated daily.
- Address-specific reports that make it easy to associate possible storm damage to the condition observed at the property.
- Access to storm data over the last 90 days surrounding a claim's listed date to help easily verify date of loss, coverage dates, and filing limits.
- 24/7 availability.

## Restoration Manager Job Management

Integrated closely with Xactimate and XactAnalysis, Restoration Manager helps manage property damage restoration and reconstruction jobs while saving time by sharing job information, reducing duplicate data entry, and increasing productivity.

Restoration Manager is a comprehensive cloud-based software tool for the restoration industry. From your desktop or mobile device you can manage your jobs real-time, control schedules, monitor costs, and communicate with your technicians and trade partners. Restoration Manager is rich with features, including:

- ✓ Company performance dashboards
- ✓ Task management
- ✓ Document and signature capture
- ✓ Correspondence tracking
- ✓ Equipment Management
- ✓ Full CRM for sales & marketing
- ✓ Integrations with 12 accounting systems
- ✓ Gantt Scheduling

Restoration Manager also delivers a wide variety of reports with multiple search and run options to give you and your team the data you need to effectively manage your business.
