

Building Overview Report

*Commercial building data
you can count on*

When you're underwriting a commercial building, you need reliable, up-to-date information to make sound risk management decisions. Now, through ProMetrix®, you can get building information for the vast majority of commercial properties in the United States. Verisk's Building Overview Report gives you insight into the accuracy of municipal data that you can use to evaluate buildings not yet surveyed by Verisk field representatives.

You'll get:

- an assessment of the accuracy of the reported building square footage using Verisk-calculated percentages for key areas of the building
- the percentage of buildings where the number of stories reported in the public records database matches what's in the ProMetrix commercial property database
- the percentage of buildings for which the construction type reported by a municipality matches the ISO construction class

The Building Overview Report also gives you:

- a Property Characteristics Report with public records data on tax and market sale information, location and site information, and specific property characteristics
- LOCATION® Public Protection Classification (PPC™)
- LOCATION territory codes for commercial property, commercial auto, and Group II zones
- LOCATION building code information with Building Code Effectiveness Grading Schedule (BCEGS®) classifications and the year the codes became effective

- LOCATION wind information, including distance to ocean or gulf, distance to nearest body of water, and names of the bodies of water
- LOCATION crime information with past, current, and forecasted crime scores for eight crime types, aggregate crimes against persons and property, and overall crime risk
- an InfoUSA Business Report, with detailed information on up to four building occupants
- photos of the front and back of the building
- aerial imagery of the building (when available)

More about the Building Overview Report

The ProMetrix database contains site-verified information for about 3.5 million commercial buildings. We use the database as a benchmark to compare our site-verified data with public records to determine the accuracy and completeness of the public data and provide metrics so you can gauge its usability for underwriting and rating.

For example, we calculate the percentage of buildings for which the information in the public records database matches the square footage in our database, plus or minus 10 percent. You can make informed decisions about the value of the public records data since you can better measure its accuracy.

High-resolution aerial imagery

Taken at an elevation of 2,500 feet and with an outstanding 4-inches-per-pixel resolution, aerial images give you north, east, south, and west views of the building and a top-down view.

The report images can help you:

- gather complete visual information on the property and structure
- determine exposure to hazards such as brush, fuel, and coastline
- identify external and adjacent exposures surrounding the property
- examine roof detail in different views, which may reveal problems you can't see from the ground
- view the highlighted property parcel boundaries clearly
- assess risks such as attractive nuisances, property condition, and general neighborhood characteristics

Report benefits

The Building Overview Report:

- minimizes your concerns about the accuracy of public records data by providing an intelligent comparative score
- increases your property search success rate in the ProMetrix database
- improves your overall efficiency by bundling the information you need — all from a single Verisk system — to support your rating and underwriting processes

ProMetrix web delivery

The Building Overview Report is available through the ProMetrix system. Our web-based system delivers reports quickly and efficiently in a format that's easy to read and printer-friendly. You can save or send completed reports electronically and get delivery of multiple reports with a single order. If you decide to order additional underwriting reports, such as an Estimated Loss Cost Quote Report or Estimated Replacement Cost Report, you'll be able to switch seamlessly among them. It's like having an online file cabinet at your instant disposal — with information on virtually every commercial building and the businesses in them.

Providing detailed property characteristics for effective underwriting

Building information

Here you'll find the building's full address and the ISO Risk ID assigned to the property.

Assessment of Property Characteristics

The Assessment of Property Characteristics uses a match frequency model to represent the accuracy of building data collected by municipalities compared with building data collected by Verisk field representatives.

Total building area

For different areas of the building, you'll get reported square footage and the Verisk-calculated match frequency.

Number of stories

You'll get the reported number of stories and a Verisk-calculated match frequency.

Construction type to ISO construction class

You'll get the reported construction type, the equivalent ISO construction class, and the percentage of time that the municipal construction type matches the ISO construction class.

Property Characteristics Report

The report provides the following municipal data:

- owner information
- lot and block, parcel number, and school district
- owner transfer information
- last market sale information, including pricing, title company, and deed type
- prior sale information
- site information, including zoning, lot size, topography, and water type
- tax information
- property characteristics, including information on building areas, garage and basement, patio and pool, and roof and floor
