

Visit Fire Chiefs Online for information to help you improve your community's ISO Public Protection Classification (PPC™)

Fire Chiefs Online, a free service to fire departments around the country, is a special secured website to help you manage your community's fire-suppression services.

If you're already a registered user of Fire Chiefs Online, or to register for access, go to www.isogov.com.

The site features:

- interactive maps of your fire protection area that integrate property locations from ISO's database of more than 3 million commercial properties in the United States
- valuable reports on commercial buildings in your jurisdiction, with information on construction, occupancies, hazards, and sprinkler systems
- an online Community Outreach Questionnaire that you can complete to let us know about the latest improvements in your fire department
- a Needed Fire Flow Estimator to estimate the amount of water that should be available for fire protection at individual buildings

Keep your community's information accurate, and update it anytime

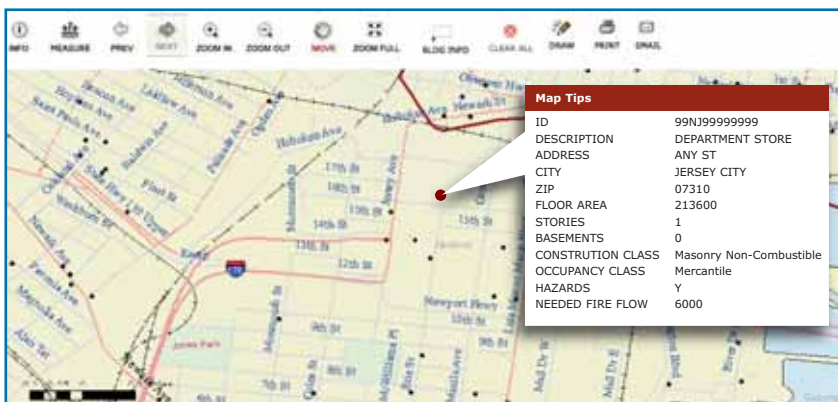

Fill out the site's wizard-driven Community Outreach Questionnaire to notify ISO about the essential fire-protection features in your community. Tell us about the latest improvements in your fire department, water supply, and alarm system. If the information you provide indicates that your PPC™ should change, we'll contact you to arrange a full evaluation. And since most insurers use PPC in calculating premiums, keeping us up to date can lead to real cost savings for property owners in your community.

Improved GIS maps

Fire Chiefs Online features new GIS maps that include a geocoder to locate addresses, varying zoom views, and measuring and drawing tools. Users can profile properties on up to eight different building characteristics, such as construction class, square footage, height, and needed fire flow.

You can select an area and view information about features you choose, such as fire stations, water supply, and commercial properties. You can also edit information and print or send maps by e-mail to update ISO on fire station locations and boundary changes.

You can get additional information on a specific commercial building you select. For more details on the building's construction, occupancy, and fire protection, click on ID to view the building's Property Report.

You can view and update all the property reports in your jurisdiction. Information in the reports can help you assess the fire-suppression needs in your community. Construction, occupancy, and protection information includes:

- needed fire flow
- sprinkler credit
- materials used in the roof, walls, and floors
- hazards
- combustibility and susceptibility
- number of floors and basements

About ISO

ISO is a leading source of information about risk. In the United States and around the world, ISO helps customers identify and mitigate risk. With the cooperation and support of many federal, state, and local agencies, we deliver mission-critical information to help solve challenging infrastructure problems and aid in disaster readiness and threat assessment for communities.
