

Field survey data plus analytics equals the most accurate information

High-quality risk-assessment surveys combined with proprietary data and analytics can give you a competitive edge with the most up-to-date information on conditions and hazards at any property in the United States.

You can combine our expert surveys with our ProMetrix[®] database, which features more than 3.7 million commercial buildings and approximately 26 million businesses in the United States. Add other proprietary sources of data, and we can design a package to meet your specific business needs, complete with built-in discounts and other cost savings. Access the data easily through an online report-ordering system or application program interface (API).

Additional Rating Refinement

Verisk has more than 500 highly trained, full-time employee field analysts—strategically located throughout the country—who conduct on-site surveys of hundreds of thousands of properties and businesses every year. We analyze the data against information from multiple sources and provide you with underwriting-ready analytics that include:

- hazards that threaten buildings, premises, and people
- bodily injury exposures
- recommended improvements that can reduce risk
- replacement cost valuations
- internal protection systems, such as automatic sprinkler systems and fire alarms
- conformance of individual business sites to loss

Combined efficiencies

You can create a customized package of survey services and analytics to help you streamline operations, save money, and reduce the time to perform tasks. You get site information, loss costs, valuations, and surveys from a single source, with the ability to integrate your rules and specifications into an automated workflow. Your insureds benefit from the convenience of having just one visit from a field analyst to complete all their requirements.

A variety of choices

Your tailor-made package can include orders for updated loss costs at a discounted rate. You can implement conditional ordering based on your criteria. We offer a reduced, fixed flat fee for combining coverage-based surveys and reports, such as property, general liability, workers' compensation, inland marine, site-specific catastrophe reports, and more.

High-Risk Notification Service

Our High-Risk Notification (HRN) Service provides immediate notification to the insurer when a field analyst encounters a property or risk that presents a higher than expected potential for loss. It starts with the field analyst calling the insurer immediately when an HRN condition is found and following up with an e-mail (including photographs) describing the conditions. And we can customize HRN criteria based on your own hot buttons or exposures that don't meet your underwriting guidelines.

A Survey for Every Need

Property Surveys for any commercial or residential property in the United States

Builder's Risk the project, building, exposures, and controls

Inland Marine equipment, motor truck cargo, and warehouse legal liability

Multiline

property and liability exposures, including products and completed operations, auto, and crime
