5

certified fire service instructors

3

architects

Onsite surveys provide underwriters with the granular, site-verified risk characteristics they need to price a policy properly. The key to consistency and quality output is to have the survey conducted by an experienced field analyst backed by a superior data and analytics company.

The Verisk Survey Team

At Verisk, our experienced and diverse field force averages nearly 12 years' experience per person, and our network of analysts are spread throughout the country.

Our staff conducts about 350,000 on-site surveys and 5,000 community hazard mitigation surveys annually.

Well Trained

Our field analysts are trained in all critical areas, including property, casualty, mitigation, workers' compensation, sprinkler system design, business interruption, crime exposures, water supply evaluations, alarm systems, and many more.

We have a formal training program with about 60 training sessions, and our Quality First program reviews performance frequently to make sure our field analysts maintain a high level of quality work.

Team Accreditations

Many of our field analysts hold a variety of other designations too, including:

- **AAI:** Accredited Advisor in Insurance
- **ALCM:** Associate in Loss Control Management
- **AIC:** Associate in Claims
- **ACP:** Associate Compliance Professional
- **CCP:** Certified Compliance Professional
- **AINS:** Associate in General Insurance
- **AIS:** Associate in Insurance Services

- **NICET Level III:** National Institute for Certification in Engineering Technologies
- **RPLU:** Registered Professional Liability Underwriter

Verisk has full-time, state-certified field analysts in Arkansas (Arkansas Workers' Compensation Commission), many representatives certified in accordance with the Texas Department of Insurance Loss Control Program, and several team members in Pennsylvania certified by the World Safety Organization.
