

Empowering the Energy Insurance World with Data Analytics

Energy and Insurance solution benefits:

- Streamline the underwriting process to **reduce your expense ratios**
- Bring more precision to underwriting models to **improve your loss ratios**
- Support strategic planning with better commercial information to **enhance growth and profitability**
- Better integrate portfolio and single risk modeling and accumulation management capabilities to **protect capital, solvency, and financial strength rating**

Verisk is working with:

- 11,500 data points on more than 400 refineries around the world
- 55 million energy data points in the global upstream oil and gas industry
- information on 8,900 power plants in the United States
- 20 billion records from more than 1,800 insurers
- data on 3,200 mining and metal assets, including coal, iron ore, and gold
