

PAAS Explorer: The Ultimate Tool for Policy Classification

Incorrectly classified policies can erode your hard-earned business, so accurate classification is critical to ensure that the premium you charge is correct.

PAAS Explorer is a new tool offered by Premium Audit Advisory Service (PAAS) that takes the tedious classification lookup process and provides data in seconds to help you correctly classify policies with confidence.

Accelerate accurate policy classification

With PAAS Explorer, you can:

Identify classification codes that appear together on the same policy so you can check if you need to add or remove any codes on your policy.

Find classification assistance for operations that aren't frequently classified by auditors or underwriters so you can improve classification accuracy.

Get credible results based on industry data from approximately 14 million general liability policies from the past five years so you can trust the accuracy and reliability of your classifications.

Why choose PAAS Explorer

PAAS Explorer is the only tool that offers you:

- **Comprehensive**, up-to-date data from millions of policies across the country.
- **An intuitive interface** that allows you to find what you need in seconds.
- **Unmatched credibility** from five years of ISO's industry historical statistical data.

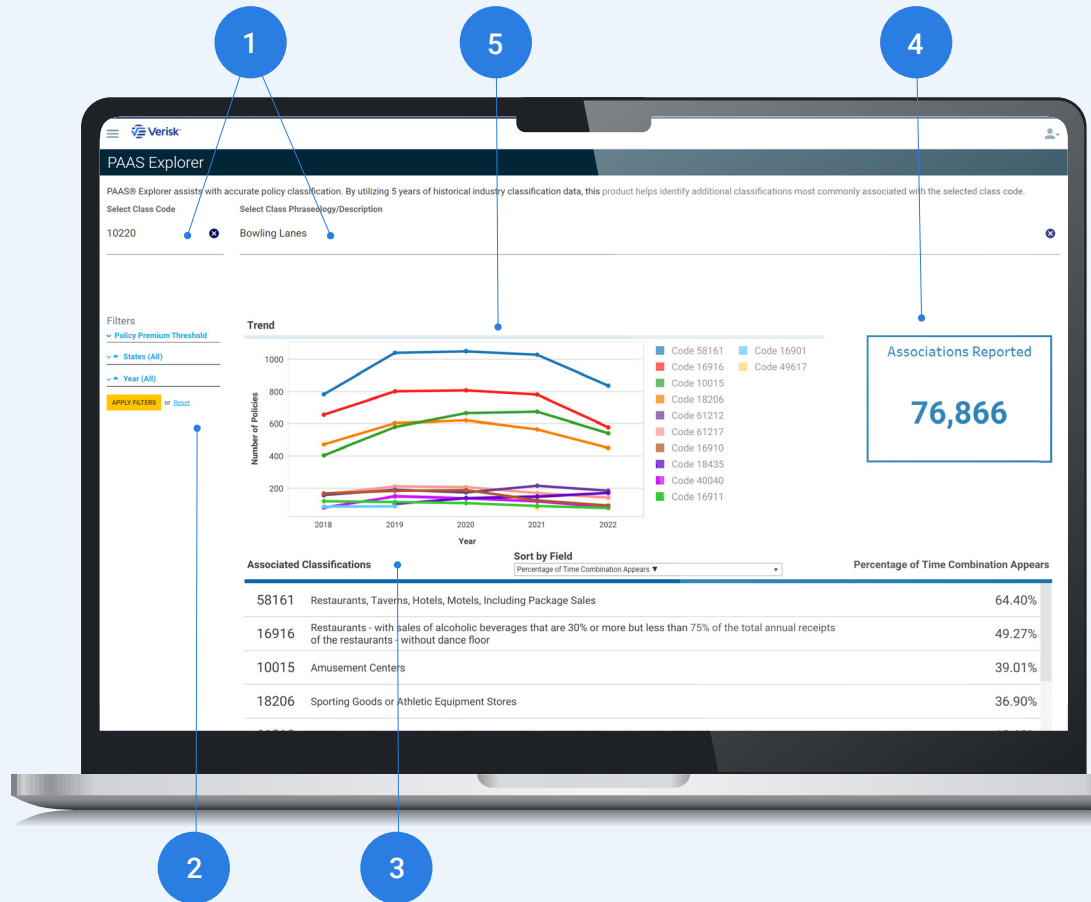

How it works

PAAS Explorer is easy to use and provides results quickly.

All you need to do is:

- **Select a classification ①** by entering the class code number or description, and PAAS Explorer will autofill it for you.
- **Filter the data ②** by policy premium amount, state, and/or policy year.

View the results, including other classifications most commonly assigned on the same policy as the selected code ③, including the percentage of time this combination appeared and the total number of times the selected code was associated with other codes ④. You can also see a chart providing a 5-year trend of the top 20 classifications associated with the selected code ⑤.
