

360Value: The Full Picture for Commercial Property Replacement Costs

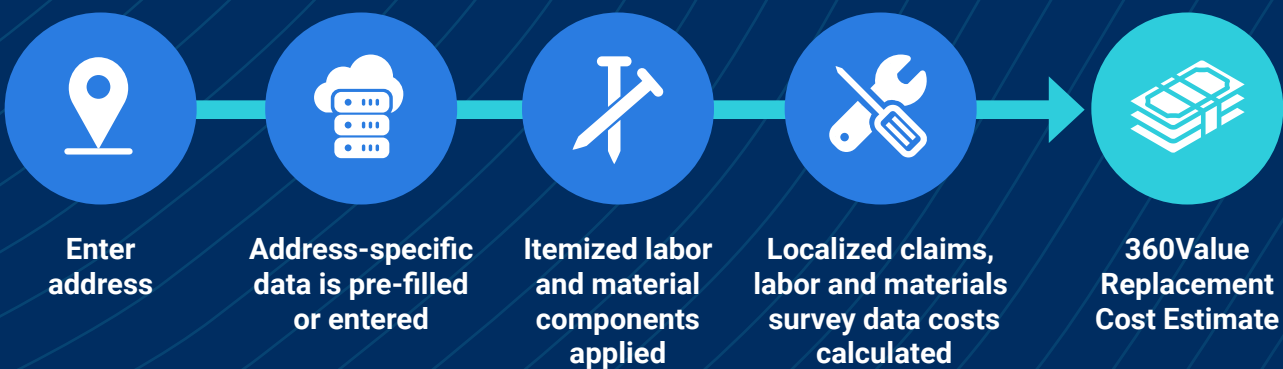

360Value® provides claims-driven, component-based estimates that account for virtually all material, labor, and other costs required to rebuild. These dependable estimates draw on the work of Verisk professionals, who continually research and validate construction cost data at the local level. This research and analysis helps ensure that 360Value offers consistently accurate and current replacement cost data.

Property product suite

Underwriters count on 360Value for accurately estimating replacement costs because it's based on actual claims data.

Align your coverage to claims

360Value shares the same pricing database as Xactimate, which is used in 9 out of 10 property claims

360Value delivers world-class customer service

The 360Value experience provides an accurate, easily configurable, and fully integrated data solution that's backed by Verisk's client services team. Discover why 360Value is becoming the most widely used reconstruction cost estimator in the United States.
