Identify property features and characteristics

Data derived from aerial imagery can be used as another tool to help insurers automate more accurate underwriting throughout the policy lifecycle.

- Aerial imagery
- Roof material
- Roof condition (score and underlying issues)
- Roof shape
- Solar panels
- Tree coverage (roof/parcel)
- Defensible space (from vegetation and structures)
- Swimming pool (including diving boards and slides)
- Attractive nuisances (sports courts, playground equipment, trampolines)
- Decks
- Screened enclosures
- Yard debris (coming soon)
- Parcel area
- Building count
- Vehicles (private passenger, RV, boat)
- Defensible space (from vegetation and structures)
